APPENDIX B-1

Summary of Oral Comments from Public Scoping Meetings

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Inarajan Public Scoping Meeting, July 7, 2004, Inarajan Mayor's Office

Date	From	Comments
July 7, 2004	Rose Farrell Sizemore	<ul style="list-style-type: none"> • Why do we have to wait for the landfill to recycle? Why doesn't DPW and Government of Guam begin neighborhood recycling program? Why isn't public provided with public service announcements to encourage recycling? Business should be required to pay for recycling of the bottles they sell. • Little to no maintenance or sanitation of government or privately owned commercial trucks. • Questioned Preliminary Landfill Site Suitability Report ranking of Dandan as number 1, regardless of exclusionary criteria that ruled out southern Guam and Talofoto/Ugum watershed. Isn't Dandan location adjacent to Ugum River (map on p. 15 of report)? • Aren't farmers or farmland to east of Dandan significant enough? Suggests that Lonfit or Sabanan Batea area be zoned M-2, far away from agricultural zone or farmland. • Isn't Dandan part of historic Guam? • Most roads on Guam need repair. Critical of Government of Guam's ability to improve or upgrade road conditions to Yona or Inarajan to support landfill site. • Populated areas in north and central parts of island will produce largest amount of waste. Even with transfer stations, increased distance to south and cost of fuel consumption should be considered. • Aren't farmers or farmland to east of Dandan significant enough? Suggests that Lonfit or Sabanan Batea area be zoned M-2, far away from agricultural zone or farmland.
July 7, 2004	Joseph T. Flores	<ul style="list-style-type: none"> • Critical of landfill liners. Cited GeoServices study on liner leakage.
July 7, 2004	Jose S.N. Chargualaf	<ul style="list-style-type: none"> • The Talofoto and the Ugum source are interconnected to our only potable drinking water in South. • Three of the rivers in Inarajan municipality are going to be covered with the landfill: Tinaga River, Fensol River, and Finatasa. And then there are two other rivers that are interconnecting: Siput and down to Pauliloc. And eventually what is going to happen when these things leak? And they will leak. • Talofoto and the Dandan area are historical enough for us to justify that they shouldn't even treat this as non-historical significant place. • The road system on this island is in such a dilapidated condition. Oh yes, maybe by the way, when they build the landfill they will probably build us a nice highway. But that's just maybe. • The bays are important to us, including from Talofoto, Nomna Bay, Pauliloc Bay which is Tinaga, Inarajan Bay, and even as far down to Agfayan. These are our survival as the Government has failed miserably for our economic growth down here in the south.
July 7, 2004	Mayor Anthony "Barny" Leon Guerrero	<ul style="list-style-type: none"> • Look at incinerator and landfill at the same time. Consider what is good for the long run. • Not worth to recycle on Guam. • Consider health and welfare of the community of the South. • Who will run landfill? Critical of government's ability to stick to a plan. • If this is foolproof than it can be put up north. • Concerned about road congestion. • Questioned amount of property for landfill. • Critical of transfer stations. It's another facility that's going to be built within somebody's backyard to separate trash. Malojloj smells if trash not picked up on schedule.

Inarajan Public Scoping Meeting

Date	From	Comments
July 7, 2004	Mike Reyes	<ul style="list-style-type: none"> • How many studies done? Noted Saipan Landfill example. • How long is the life expectancy of liner? • We need to help the landfill by recycling, wherever it is sited.
July 7, 2004	Jesse Perez	<ul style="list-style-type: none"> • Inarajan is a farming community. How many landfills built in and around farming communities in the United States? • What are the potential dangers in the event the landfill does break down? How long before the area is environmentally safe again?
July 7, 2004	Loretta Chargualaf Rollins	<ul style="list-style-type: none"> • Concerned about potential for landfill to fail from high winds and flooding from rain, and earthquakes. • Landfill poses hazard to South's unique source of future drinking water. • Landfill will pose breathing hazard should prevailing winds shift in a southeasterly direction. Concerned with potential stench from landfill. • Visibility of landfill will be public eyesore to tourists and commuters. • How can one repair a guaranteed leak to several leaks under tons of trash? • Concerned that cost will drive landfill construction and operation. What makes us think the developers will pay out funds for road improvements and constant monitoring once the super landfill is in place?
July 7, 2004	Angelica Mantanona	<ul style="list-style-type: none"> • Agrees that we need a site to place our waste. Suggests that instead of a landfill we create a site that recycles, reuses, & controls toxic chemicals and metallic waste. If the people can pitch in, recycle in their own homes, we won't have to worry about leakages. • Approach it differently, not by building a landfill that could leak and endanger our water supply.
July 7, 2004	Albert Topasna	<ul style="list-style-type: none"> • Dandan property is owned by the Calvo family and John Lee a citizen of Hong Kong and affiliated with Oxford properties. How much money are we paying for this property? Who's brokering this deal? Conflict of interest. • I have families here. I don't want any deformities. • Was told by Public Works yesterday a decision has been made. Suggested property at Mt. Lamlam in Umatac as an alternative landfill site.
July 7, 2004	Benny Paulino	<ul style="list-style-type: none"> • Assuming that this landfill is selected here in Dandan, how do we..what do we tell the private property owners who before you know in order to access the private property who would have to go through this landfill area. What are we going to tell the private owners there? Okay? • Suggests that Dandan residents be afforded an opportunity to go out to that site and so that they can make their own personal observation.
July 7, 2004	Andrew Manglona	<ul style="list-style-type: none"> • Asked of Inarajan Mayor, what organization has been formed to block landfill in our community in Dandan? • Has a cost analysis been done between landfill and incinerator? If landfill construction will cost \$50 million, how much will an incinerator cost? How much annually to operate landfill? • Has a study been made on existing soil infiltration? Concerned that during heavy rains leaching pond will be overwhelmed and spill into adjacent river, which goes into Ugum water supply, that feeds the southern areas. • Comment that consultants' slide show presents the closest community as nine miles from proposed Dandan site. The school and water well are only about 1 mile away from proposed Dandan site. Under proposed new landfill regulations, what is the minimum distance to the closest water treatment plant, Ugum River, deep well, school, and river or wetland? • What knowledge or experience makes the consulting team the most qualified for this design study? How many landfills have you designed? Wants names and addresses of team should any problems occur in community due to poor design.
July 7, 2004	Roke Aguon	<ul style="list-style-type: none"> • We should accept that we are going to make trash and we are going to need a landfill. We have to dump our trash somewhere. Guam is only 30 miles in length so everywhere is our backyard. • We've got to start educating yourselves from within. We have to be careful what we ask for. We want an incinerator, but we don't know the pollutants.

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Inarajan Public Scoping Meeting

Date	From	Comments
July 7, 2004	Joe Quichocho	<ul style="list-style-type: none"> • Look at Ordot Dump, it's being maintained. No flies, no smell.
July 7, 2004	Genadine Aquino	<ul style="list-style-type: none"> • Goes running there every single day. • Nine-mile distance incorrect from landfill site to Malojloj community. • Critical of staff attitude toward public.
July 7, 2004	Salome Q. Ocampo	<ul style="list-style-type: none"> • Who's going to get money for the land that's going to be used? Are we going to go to Mt. Lamlam? • Recycles aluminum cans but not worth the gas to transport it to recycling center. Frustrated by recycling laws that are not enforced by Government. • Who will manage the proposed landfill? If Government of Guam, will it go as proposed or will it be a newer Ordot Dump? Instead of charging a tipping fee, let every taxpayer pay a set fee that is collected or deducted when they file their taxes, which must be earmarked specifically for trash removal and disposal. • Who makes the final decision on the location of the landfill? If it is voted upon by the total population, the people of Inarajan will have no voice because we are few in numbers.
July 7, 2004	Christina Flores Wilson	<ul style="list-style-type: none"> • What are some of the problems already encountered in other landfills? Have typhoons, weather on Guam been taken into account?
July 7, 2004	Charles Mantanona	<ul style="list-style-type: none"> • Andersen Air Force Base landfill built over northern water lens is receiving inappropriate waste. • Dandan is not a good site because of wetlands, groundwater, and springs. • Agree with Lonfit for landfill site because we are not consuming any water coming from Lonfit River. • Dandan is not a good site because of wetlands, groundwater, and springs. • Malojloj is land of the country people, let's not destroy it. • Suggested another site in southwest Guam that is downwind of residential areas. • Critical of government's ability to run landfill. Naval Station dumpsite polluted Agat, Piti area.
July 7, 2004	Eloise Ecle	<ul style="list-style-type: none"> • Family hunts, fishes and has farmed in Dandan area. • Who will be maintaining landfill facility? Is GovGuam maintaining facility? Southern High School given as example of government funds spent on facility not up to standards. • Questioned how GovGuam will fund landfill if it has no money to fix Ugum Dam.
July 7, 2004	Jimmy B. Mantanona	<ul style="list-style-type: none"> • It's a traditional, cultural thing. We have Gef Pago down here; we try to preserve whatever historical resources, fresh produce, and wildlife down here. • We should look into having the landfill up in central area where it's more convenient for the north and the south. Our taxes are rising and people are complaining about not having enough money. Travel all the way down from the north to the south is costly for residents and landfill operator. We are going to start seeing trash all over our highways from illegal dumping. • Expecting metallic waste at this site? • Need to respect people in south who are less fortunate, can't even afford to travel off-island.
July 7, 2004	Mayor Franklin Taitague	<ul style="list-style-type: none"> • All public input must be on PSR. Consultants need to come back to present findings to Malojloj residents. • Consider the infrastructure our poor roads, bridges, and things like that, utilities, water resource problems. • Consider historical value of Inarajan and other areas in Dandan. • Consider the natural habitat that was specifically emphasized. • Consider the recreational use of site. • Consider the economic impact.

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Yona Public Scoping Meeting, July 8, 2004, Yona Senior Citizens Center

Date	From	Comments
July 8, 2004	Simon Cruz	<ul style="list-style-type: none"> • What kind of plastic will be used for liner? What is warranty on liner when installed? How many years is it guaranteed? • What happened to previous study by Juan Tenorio and Associates on the other landfill sites? Why is the government paying for another study? • Naval government started Ordot Dump 60 years ago. Why can't the federal government pay for cleaning it up? • Navy landfill at Orote Point contaminated water so people can't eat the fish. Air Force dumped waste at Pati Point. These waste sites need to be studied and cleaned up. • Lonfit and Sabanan Batea are contaminated by Ordot Dump. They need to be studied and cleaned up. • Why can't we recycle some of waste from Ordot Dump?
July 8, 2004	Patrick Mason	<ul style="list-style-type: none"> • Methane gas is burned off or goes off into the air? How is it managed? Do we know if active or passive management? Is methane odor free? Smells like rotten eggs? Carried with the wind? • Liners leak over time? • There is an archaeological site within proposed landfill footprint at Sabanan Batea. What's being studied at that site? Possible that previously documented sites may be expanded? What concerns me is that these sites will be right where they're going to dig for landfill. It could hold up entire project for an undetermined period of time. Possible there may be burials found. • Where would access be to the site (Sabanán Batea)? Along road to Leo Palace? During construction, Leo Palace road will be used? Could expect in this area to have dump trucks going through Ordot or Yona? • Where would access be to the site (Sabanán Batea)? Along road to Leo Palace? During construction, Leo Palace road will be used? Could expect in this area to have dump trucks going through Ordot or Yona? • Length of time Ordot Landfill has been here in this area of the island, it's time for a change, and time to give people in this area some kind of a break. • Leo Palace is there in a developing area. Having a landfill in the area will reduce the incentive for people to build houses and developers to use area. Always a psychological factor, you can say it's clean, it's not a problem. If I'm going to build a home, last place I would choose is a dump.
July 8, 2004	Terry Cruz	<ul style="list-style-type: none"> • Given financial picture of Guam, how much is EIS study costing? How much is the actual project going to cost? Where is the money coming from? • Based on Black & Veatch experience in Arizona, what was rise in the tipping fee after landfill constructed? What is tipping fee for Marpi Landfill in Saipan?
July 8, 2004	Vice Speaker, Sen. Frank Aguon, Jr.	<ul style="list-style-type: none"> • Suggestion from Inarajan community member is to establish a trust fund for immediate residents around landfill site. The fund would be fed from a percentage of tipping fees. If there is problem with compliance, the fund would be used for legal means to force compliance upon the government or private landfill operator. Fund may be used for Ordot Dump once it is closed.
July 8, 2004	Mark Mafnas	<ul style="list-style-type: none"> • Is there a safeguard for fires? • Is there any study or information comparable to our needs here in other states? • Plastic lining has life of 30 years. If there is one small chance there is a leak and it infiltrates the water underneath, what is the action plan? • Tipping fee is \$8 now. Landfill may cost \$50 million to build, but what is the cost for consumer? What are they paying in other states?

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Asan Public Scoping Meeting, July 12, 2004, Asan-Maina Community Center

Date	From	Comments
July 12, 2004	Columbus Development Corporation: Attorney Michael Berman	<ul style="list-style-type: none"> • Heard comment that liner is designed to prevent leakage but other piece of literature that there is inevitably some leakage and if there is no leakage than why not northern sites, Yigo or Dededo, but if there is leakage than look at other nearby water sources. • Lonfit area borders GWA water reservoir and is directly above Lonfit river, so if leakage is insignificant so this is not an important factor, but if leakage is significant, this is a significant factor. • Lonfit has highest population of three sites. • Lonfit site located right on river, according to literature (personally has not been there) there is also a pond or diking nearby, so there is water connected to this. So if there is leakage and water nearby and it's placed on a river than why is this such a good site? • Comment that geology and hydrology of Lonfit site suggest it is water-bearing and that a small stream may run over or beneath the site. • Comment Lonfit site may be unsuitable because rivers and shallow water tables may be present. • Project contemplated since 1989/1990 that has all approvals, 1000 acres, condominiums, golf course and downside would be considerable economic benefits and profits would flow from that and these not seen in the other two sites. • Timing considerations, Consent decree does allow up to December 11, 2007 and maybe more time to analyze the science. Company can bring scientists here. Consent decree is Dec. 11, 2007, and site going to be picked in three months. Perhaps that's a little hasty given time period involved and response heard regarding leakage.
July 12, 2004	Mark McCarthy, Ordot/Asan	<ul style="list-style-type: none"> • At Lonfit site, spring in river is within about 200 feet of the footprint of landfill. The spring runs year round. • Two streams in area of Lonfit site. Pointed out another river, maybe Famha. Tributary of Chaot river. Pointed out Chaot River pump station and if leakage does happen than quite possible it will affect that water. • Map of Asan/Lonfit area gives some direction on what's in the area. Proximity to homes in area on Turner road will be directly in wind direction of landfill. Public law 26-152 provides that people that live within one-mile area of landfill have medical monitoring. Will public law be enforced? • Critical of liners and leakage system collection and potential for breaking down. • Projecting about 500 tons a day? Based on projections at what height do you expect the final height to be in thirty years? • Asan, Lonfit site is the smallest? Within 200 foot buffer area, is 65 acres enough to provide for support? Infrastructure? • This process will be shelved when it comes to making the decision.
July 12, 2004	Ben Gumataotao	<ul style="list-style-type: none"> • Landfill in ocean at Washington State. Why don't we dump it in the ocean here?
July 12, 2004	Guam Boonie Stompers Association: Dave Lotz, President	<ul style="list-style-type: none"> • Consider current, valid uses in Lonfit area. • Who is going to pay for this? Tipping fee has increased illegal dumping. • Believes current group will not be managing this project 10 to 20 years from now. Community concern is lack of confidence in Government • Federal consent decree requires "at least" three sites. Scoping meeting should have taken place at nine, six or twelve site process. Should have looked at more sites.

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Asan Public Scoping Meeting

Date	From	Comments
July 12, 2004	Tina Pablo, Sinajana	<ul style="list-style-type: none"> • Concerned with carbon emissions, air pollution. • Concerned with traffic, which entrance will be used to access Lonfit site. • Concerned with noise. • According to map in newspaper, more of area (Lonfit) closer to Sinajana. • Concerned with potential leakage. • Who is "We"? Who is the private company that will run the operation? Garbage a big business. Someone is going to making money. • What happens thirty years from now? What is the future use of the area? • People should be concerned with recycling and people should be educated. • Should have been part of choosing the sites, when it was twelve sites. Why not pick another area outside of Guam, another island part of the Marianas that is not densely populated?
July 12, 2004	Joe Quichocho	<ul style="list-style-type: none"> • Opposed to Lonfit, especially if road will be used. • For 50 years, Ordot has been accommodating people of Guam. Consequence is community is living with nightmare of cancer. • Took trip to Saipan and saw the landfill. Pleased with modern technology. • Compliments to Joe Duenas for the maintenance of current dump. Area does not smell, no flies.
July 12, 2004	Recycling Association of Guam: Cole Herndon, President	<ul style="list-style-type: none"> • How long will landfill last at each site? Noted that Dandan is much larger than other sites. Suggests using hydraulic press to compact waste, extend life of landfill. • Questioned why airport safety is a siting criteria. Is it because of fire hazard from dump?
July 12, 2004	John Limtiaco	<ul style="list-style-type: none"> • When wind blows from east, it's going to travel to Sinajana and Agana Heights. Maybe Asan will be spared because of Nimitz Hill, maybe not. • Concerned with aesthetics. Can see all over island from his property. • Consider value of Lonfit area and property. Landfill may discourage foreign investors. Why pick site near Leo Palace resort? They have put millions into their investment and their area is close to the proposed site. Development at Leo Palace not even completed. • Critical of Government, Guam EPA ability to manage waste. Tires still in Tiyan from past typhoon emergency dump site, caught on fire twice. Located across from warehouse he is renting which has lots of cargo inside. • Joe Duenas good DPW director, but Ordot still has flies, although less stench. • Critical of recycling. How many people on Guam are really going to take their time and separate their trash? Illegal dumping occurring on Guam, hard to educate people to recycle. • Government narrowed sites from six to three. How about ravine in Umatac? Was it not picked because of scenery? What about scenery in Lonfit? Government should go back to drawing board, look at other sites. • Colorful charts to distract public, but still opposed to landfill in Lonfit.
July 12, 2004	David Sablan	<ul style="list-style-type: none"> • Consider logistics costs to bring trash down south. • Will need more than 100 acres of land. • Look at economics. Three sites are all privately owned, need to negotiate fee to acquire land. • Concerned with quality of life issues of area residences. • Why not dump at dumpsite instead of going through transfer stations? • Look at what we can do to have a proper solid waste plan to reduce volume, which needs to be addressed in overall scope. Look at incineration. Look at all EPA approved ways to manage trash. • Realistic number for recycling is 10%. • Previous statements said that gov't would not consider sites that were less than one mile of homes. What happened to that?

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Asan Public Scoping Meeting

Date	From	Comments
July 12, 2004	David Sablan	<ul style="list-style-type: none"> Firm belief that collective wisdom of the community of Guam is much better than any consultants to telling us where is the best site. People should have been invited to help choose the site from the original twelve looked at by government. People supported Guatali/Malaa site, Mayor's Council passed resolution in support of site. Fault line on Guatali/Malaa site far away from area, site located on government land.
July 12, 2004	Lawrence Portela, Malojloj	<ul style="list-style-type: none"> Dandan area is intertwined with many, many rivers. Cited GeoServices study of why all landfills fail. Maps in presentation and reality don't match up for Dandan site.
July 12, 2004	Selina Castro	<ul style="list-style-type: none"> If Anderson can sustain a sanitary permittable landfill that does not affect northern aquifer then why can't northern or central area not be part of the process? Why does EPA allow Andersen to take its time to choose to comply?
July 12, 2004	Lisa Villanueva	<ul style="list-style-type: none"> Why were historical sites given little weight, looking at slide show? Are we willing to put as much money regulating and mandating making sure this recycle campaign gets off on the right foot, as we are putting into this landfill?
July 12, 2004	Lou and Chris Mesa, Ordot	<ul style="list-style-type: none"> During heavy rains, water runs into their property and into Lonfit and Famja. Latte stone sites in area near Lonfit next to water tank. Going up past the Lonfit area, military used to store ammunition, along the hillside. Concerned with access road, Dero Drive, goes right past many residences at Lonfit site. Concerned with noise from big trucks passing by residences in Lonfit area. When they close Ordot Dump, what will happen to it? For private citizens, why do they stop them, when they don't stop commercial truckers or government?
July 12, 2004	Rosanna San Miguel, former Mayor, Ordot/Chalan Pago	<ul style="list-style-type: none"> Why was the previous study by JC Tenorio not sufficient? Why was the JC Tenorio study not finished? Process D&A is following is the same process as JC Tenorio? Why were the sites changed from Malaa or Guatali? Legislature uses JC Tenorio study to for their bills. Why were these three sites chosen? Why weren't D&A hired to finish the previous JC Tenorio study? What was in the JC Tenorio study makes it inconclusive? Why weren't questions from federal agencies not answered? Go back and redo study. Guatali/Malaa site far away from area, located on government land.
July 12, 2004	Joe Chargualaf, former Chamorro Land Trust Commissioner, Malojloj	<ul style="list-style-type: none"> Spring not even four feet deep gushing up at Dandan site. Ugum watershed is less than quarter of mile from proposed landfill site at Dandan. Tinaga river also feeding Malojloj water well. Marine Hole wells connected. Navy offered to exchange land property in Guatali for land area in front.
July 12, 2004	Loretta Chargualaf Rollins, Malojloj	<ul style="list-style-type: none"> Eventually leachate will leak into groundwater. Exactly how many wells to monitor groundwater? Do they monitor prevailing water flow? Typhoons will overwhelm liner. Earthquakes will compromise liner, clay composite will crack. What if surveys show area is smaller than 100 acres? Will smaller design of landfill be feasible to support entire island? Who gets compensated, who compensates. Who protects the compensated if the private operator files bankruptcy? Who pays for medical compensation and for how long? Who will pay if the people of Dandan get sick? How long does it take designated wetland to process leachate flowing into it? Incorporate incinerator and recycling program, landfill design not enough Why is Arizona landfill being used as model? How can you guarantee the integrity of the government officials?

Appendix B-1 Summary of Oral Comments Received at Public Scoping Meetings

Asan Public Scoping Meeting

Date	From	Comments
July 12, 2004	Wesley San Nicholas	<ul style="list-style-type: none"> • Is Federal EPA going to be here to make sure it works?
July 12, 2004	Rima Miles	<ul style="list-style-type: none"> • In the screening criteria, the sites could not gain any points for “intrusion on existing high value views”, why does that matter and why does it seem more important than preserving historical sites? Why is only minimal consideration given for historical sites? • Once the site is chosen, will there be more intensive historical study? Will there be a time limit, because of the consent degree, on how long this archeological study will be done? • After closing the dump and everything runs smoothly, what can the land be used for? • So with what is currently dumped everyday, is this just being transferred to the proposed landfill? • How many tons of trash dumped at Ordot on average day? • How can we implement an effective recycling plan so quickly in such a short amount of time? The thirty-year lifespan, does it include recycling? • Is this federal consent degree available to public and where can we get it? When will environmental impact statement be released? • Who came up with the screening criteria for the prospective landfill sites?
July 12, 2004	Maria Borja Dooley	<ul style="list-style-type: none"> • Ordot community has had enough of shouldering the burden of everyone’s trash.
July 12, 2004	Ron Teehan	<ul style="list-style-type: none"> • Is this a political decision? Are we ignoring the property down there because of political considerations?
July 12, 2004	Doris Taitano	<ul style="list-style-type: none"> • In your opinion, what is the desired size to meet the management of the landfill? Of the three sites, which one best fulfills the waste management needs of the island? • How does the risk management factor in? • Are you going to make the round robin of public hearings in each village after the studies are completed? If a federal judge were to selected a landfill because the island community could not make a decision, which site would he select?
July 12, 2004	Dave Laguana	<ul style="list-style-type: none"> • Plan designed for large tracks of land and we don’t have that commodity. • Concerned about liner not holding up. • Has seen Anderson Landfill, noted it is well maintained. • Encourages recycling.
July 12, 2004	Bernadette Bell, Ordot	<ul style="list-style-type: none"> • Lonfit should have never been an option.
July 12, 2004	Diana Bell, Ordot	<ul style="list-style-type: none"> • What happened to Bill 240? Asan Lonfit or Ordot/Chalan Pago Lonfit is still the same area. Bill 240 says that the landfill will also not be in surrounding areas.
July 12, 2004	June Regalado, Asan	<ul style="list-style-type: none"> • Daughter teaches at Ordot/Chalan Pago Elementary; students smell stench from Ordot Dump.
July 12, 2004	No Name A1	<ul style="list-style-type: none"> • Concern that Tinaga River is in proximity of landfill site at Dandan. • Why did the hydrologist from Black & Veatch only visit Dandan site once?
July 12, 2004	No Name A2	<ul style="list-style-type: none"> • Is the military trash taken into consideration?
